Distributed Development

I hope no one else is editing the same parts of the code as I am.

Hmmm... I think what I wrote yesterday was much better!

OK, I have now edited my code and added new classes. How can the others access it?

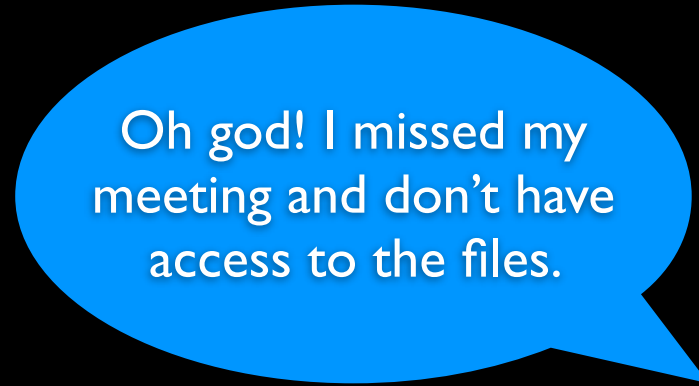

Oh god! I missed my meeting and don't have access to the files.

Distributed Development

Concurrent Versions System

...a mechanism for storing multiple versions of files.

Concurrent Versions System

...a mechanism for storing multiple versions of files.

Not only for groups, but individuals too! - Back-up - Version - Roll-back - Branches

Concurrent Versions System

- Record the history of all files in the repository.
- Share the files amongst a group of people.
- Have multiple people edit the same files.
- Merge changes from different people.
- Time portal.

Branches Example

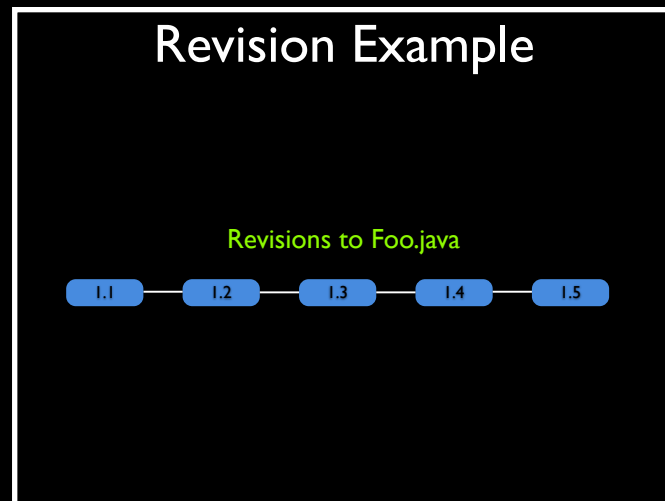

Revisions & Branches

Revisions & Branches

- Each version of a file has a unique revision number.
- Revision number has even number of dot separated integers.
- 1.1 is usually the first revision number.
- Successive revision numbers are incremented by 1.

Revisions & Branches

- Each version of a file has a unique revision number.
- Revision number has even number of dot separated integers.
- 1.1 is usually the first revision number.
- Successive revision numbers are incremented by 1.

- Each branch has a unique branch number.
- Branch number has odd number of dot separated integers.
- All revisions on a branch have revision numbers formed by appending an ordinal number to the branch number.

Why Pre-process CVS Data?

Why Pre-process CVS Data?

Tom Ball et al. “If your version control system could talk...”

Why Pre-process CVS Data?

Tom Ball et al. “If your version control system could talk...”

So, why is my CVS so silent?

Why Pre-process CVS Data?

Tom Ball et al. “If your version control system could talk...”

So, why is my CVS so silent?

- CVS has limited query functionality and is slow.
⇒ Copy CVS into a database
- CVS splits up changes on multiple files.
⇒ Infer transactions
- CVS knows only files—but what about functions?
⇒ Detect fine-grained changes
- CVS contains unreliable data which is noise.
⇒ Clean data.

Why Pre-process CVS Data?

Tom Ball et al. “If your version control system could talk...”

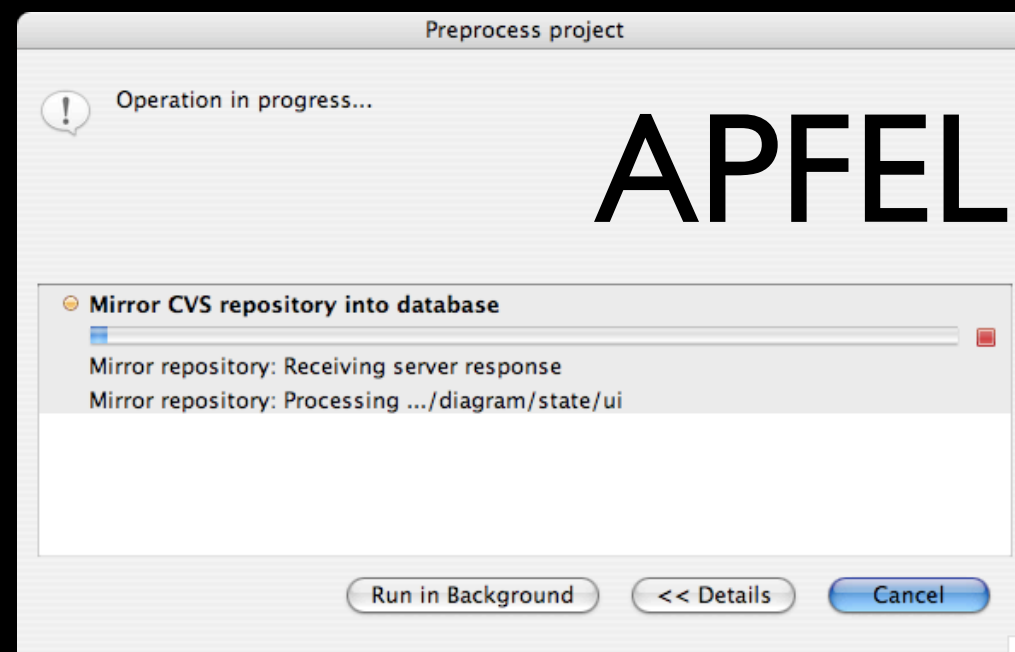

So, why is my CVS so silent?

- CVS has limited query functionality and is slow.
⇒ Copy CVS into a database
- CVS splits up changes on multiple files.
⇒ Infer transactions
- CVS knows only files—but what about functions?
⇒ Detect fine-grained changes
- CVS contains unreliable data which is noise.
⇒ Clean data.

Preprocessing is the key to a talkative version control system.

JBoss Application Server

Use of isUserInRole from jsp does not work for JACC

Created: 04/Apr/06 03:17 PM Updated: 22/Apr/06 02:37 AM

Component/s:Security, Web (Tomcat) service

Affects Version/s:JBossAS-4.0.4.CR2

Fix Version/s:JBossAS-5.0.0.Beta, JBossAS-4.0.4.GA

Security Level:Public (Everyone can see)

Original Estimate:4 hours

Remaining Estimate:0 minutes

Time Spent:1 day, 2 hours

Environment:org.jboss.test.web.test.UserInRoleUnitTestCase(JACC).testConflictingUserInRole

JBoss Forum Reference:<http://www.jboss.com/index.html?module=bb&op=viewtopic&t=81475>

Description

Use of isCallerInRole from a jsp page is failing because the (javax.security.jacc.WebRoleRefPermission jsp X) permission references the page as via the name "jsp" and there is no default mapping for this. We need to create such a permission mapping for every web.xml security-role element.

Dimitris Andreadis [14/Apr/06 05:50 AM]

Anil, wanna take it?

Anil Saldhana [20/Apr/06 02:13 PM]

The problem does not exist because of the permission mapping based on the servlet-name, but rather due to the way the jacc permissions are created based on the metaData while the roles applicable to the caller exist in the JBossGenericPrincipal.

Please refer to the forum thread for more details.

Anil Saldhana [21/Apr/06 02:17 PM]

Resolved for 4.0.4.GA.

Needs to be resolved for jboss-head.

Anil Saldhana [21/Apr/06 04:19 PM]

Resolved in HEAD.

Anil Saldhana [21/Apr/06 05:58 PM]

Scott pointed out something that was addressed in the Appendix B section of the Jacc specification. So this issue needs a short revisit.

Anil Saldhana [22/Apr/06 02:32 AM]

Resolved in 4.0 and HEAD with the Appendix (B.19) guideline in the jacc spec.

Scott pointed out something that was addressed in the Appendix B section of the Jacc specification. So this issue needs a short revisit.

Anil Saldhana [22/Apr/06 02:32 AM]

Resolved in 4.0 and HEAD with the Appendix (B.19) guideline in the jacc spec.

JBoss Application Server

Use of isUserInRole from jsp does not work for JACC

Created: 04/Apr/06 03:17 PM Updated: 22/Apr/06 02:37 AM

Component/s:Security, Web (Tomcat) service

Affects Version/s:JBossAS-4.0.4.CR2

Fix Version/s:JBossAS-5.0.0.Beta, JBossAS-4.0.4.GA

Security Level:Public (Everyone can see)

Original Estimate:4 hours

Remaining Estimate:0 minutes

Time Spent:1 day, 2 hours

Environment:org.jboss.test.web.test.UserInRoleUnitTestCase(JACC).testConflictingUserInRole

JBoss Forum Reference:<http://www.jboss.com/index.html?module=bb&op=viewtopic&t=81475>

Description

Use of isCallerInRole from a jsp page is failing because the (javax.security.jacc.WebRoleRefPermission jsp X) permission references the page as via the name "jsp" and there is no default mapping for this. We need to create such a permission mapping for every web.xml security-role element.

Anil, wanna take it?

Anil Saldhana [20/Apr/06 02:13 PM]

The problem does not exist because of the permission mapping based on the servlet-name, but rather due to the way the jacc permissions are created based on the metaData while the roles applicable to the caller exist in the JBossGenericPrincipal.

Please refer to the forum thread for more details.

Anil Saldhana [21/Apr/06 02:17 PM]

Resolved for 4.0.4.GA.

Needs to be resolved for jboss-head.

Anil Saldhana [21/Apr/06 04:19 PM]

Resolved in HEAD.

Anil Saldhana [21/Apr/06 05:58 PM]

Scott pointed out something that was addressed in the Appendix B section of the Jacc specification. So this issue needs a short revisit.

Anil Saldhana [22/Apr/06 02:32 AM]

Resolved in 4.0 and HEAD with the Appendix (B.19) guideline in the jacc spec.

Linking Bug Reports to Changes

teicher 2003-10-29 16:11:01

fixes issues mentioned in **bug 45635**: [\[hovering\]](#) rollover hovers

- mouse exit detection is safer and should not allow for loopholes any more, except for shell deactivation
- hovers behave like normal ones:
 - tooltips pop up below the control
 - they move with subjectArea
 - once a popup is showing, they will show up instantly

TA-RE

An exchange language for mining software repositories

- Results are difficult to reproduce since different tools extract data using different methods.
- Benchmarking is virtually impossible.
- Other domains have repositories or corpora (plural of corpus) of data sets, e.g. PROMISE, UCI Repository, Reuters corpus.
- TA-RE presents software evolution data including CVS transactions and bug data in an XML format.

Summary

- Databases simplify the exploration of CVS.
- Sliding time windows are superior to fixed ones.
- Fine-grained analyses are feasible and worthwhile.
- Outlook: CVS mapped with bug data facilitates research in defect analysis and prediction, code clone investigation, cost estimation drivers, code decay and many more topics.
