17

Boehm's first law

Errors are most frequent during *requirements* and *design* activities and are the more expensive the later they are removed.

This and other laws are found in Endres/Rombach: Handbook of Software and Systems Engineering. Evidence: Several studies before

18

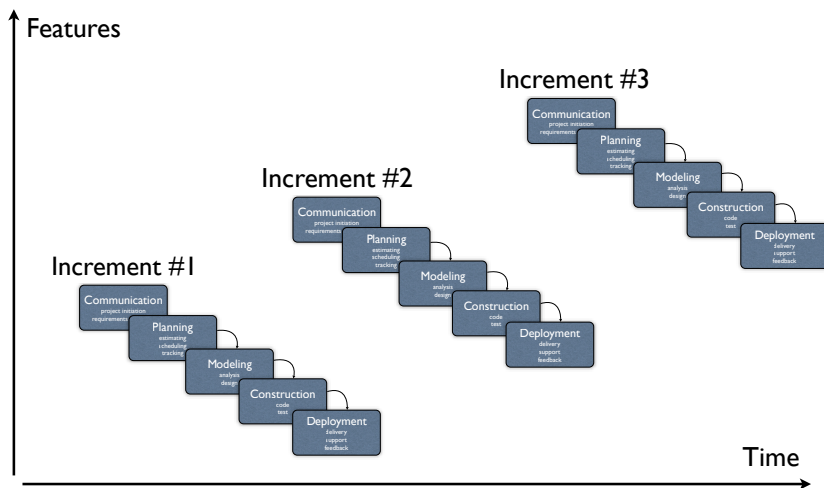

1074

Problem Cost

19

Incremental Model

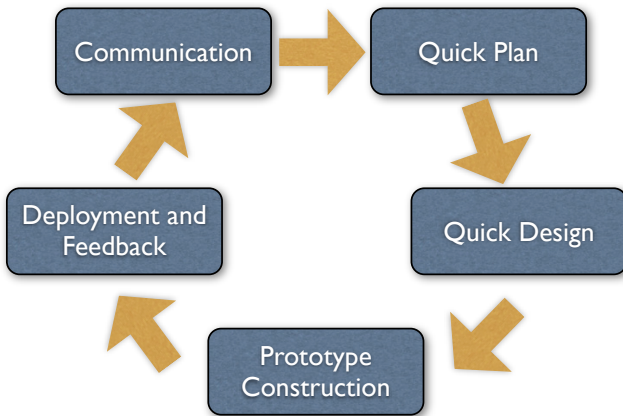

20

Incremental Model

- Each linear sequence produces a particular “increment” to the software
- First increment typically core product; more features added by later increments
- Allows flexible allocation of resources

21

Prototyping

22

Prototypes

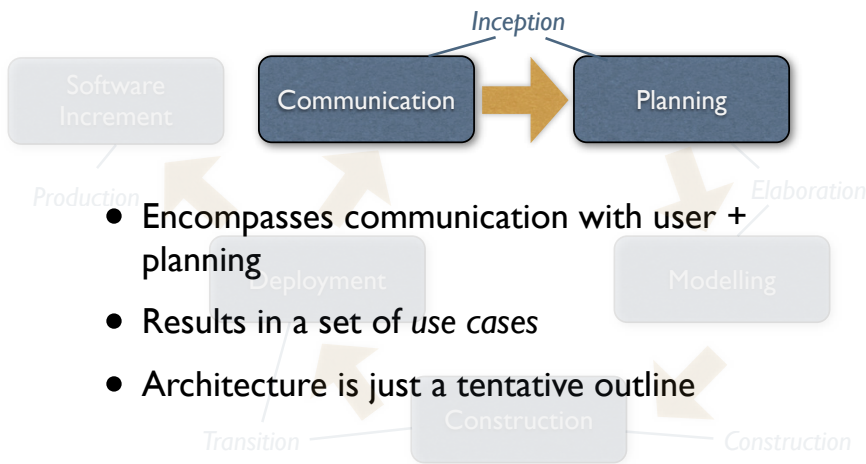

23

Horizontal Prototype

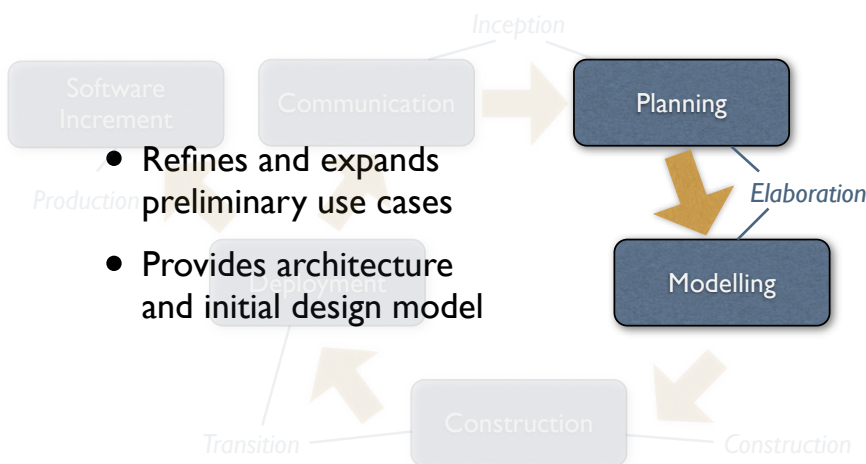

24

Inception

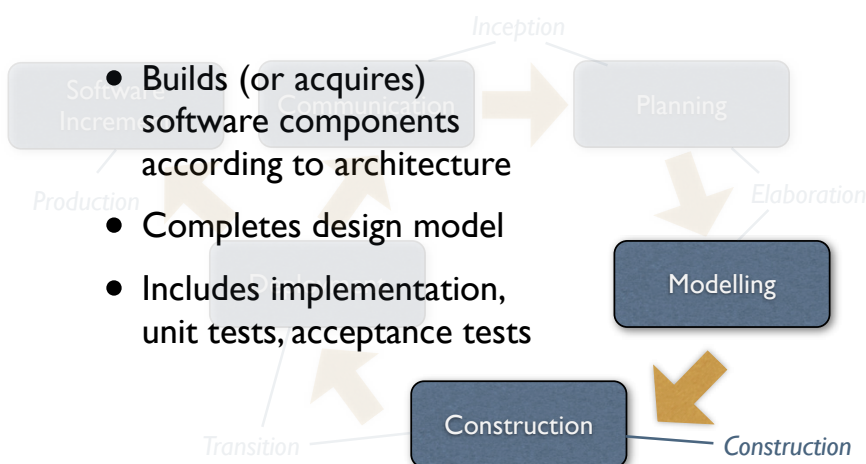

31

Elaboration

32

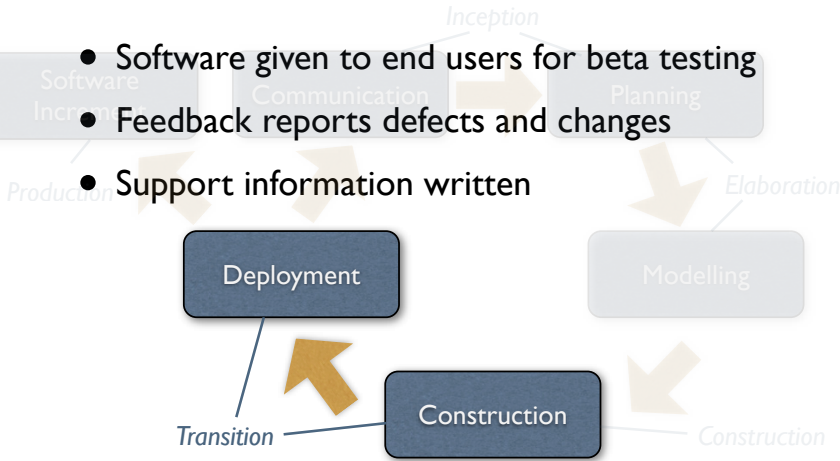

Construction

33

Transition

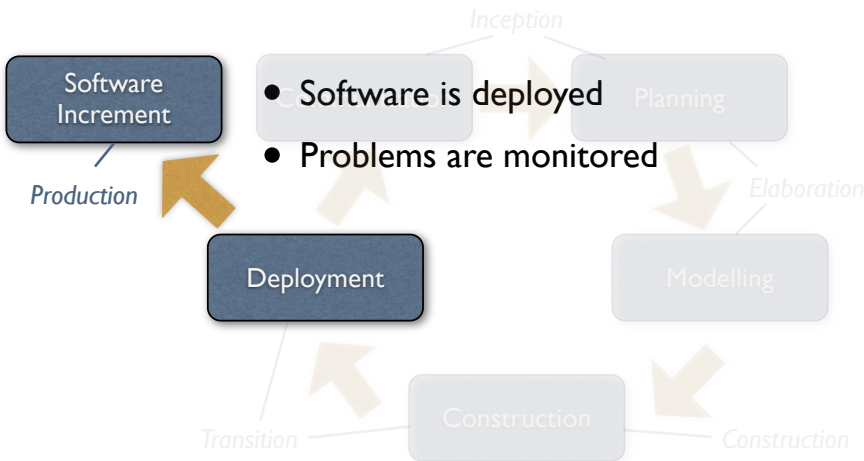

- Software given to end users for beta testing
- Feedback reports defects and changes
- Support information written

34

Production

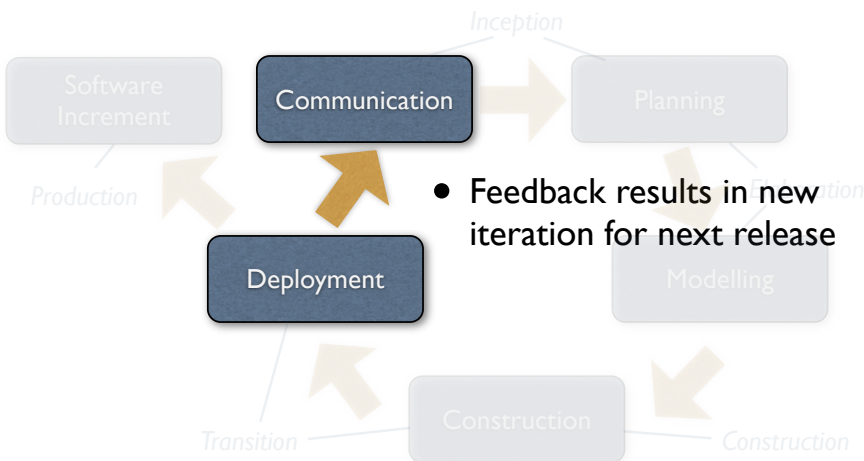

- Software is deployed
- Problems are monitored

35

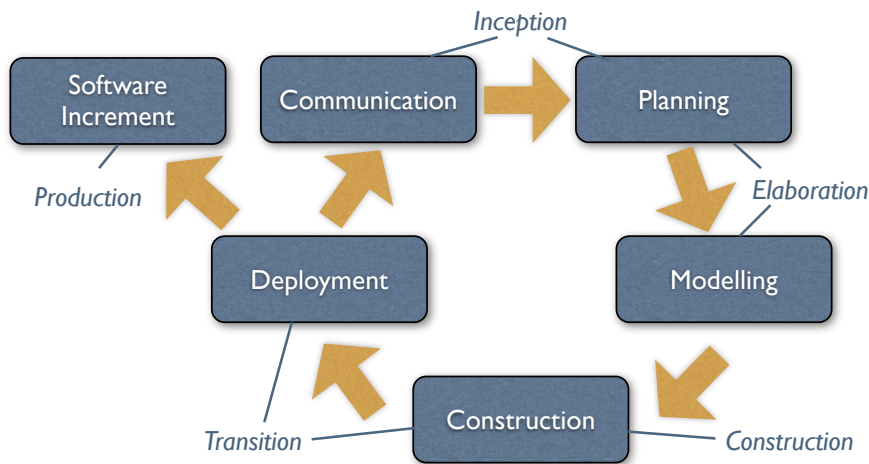

Re-Iteration

- Feedback results in new iteration for next release

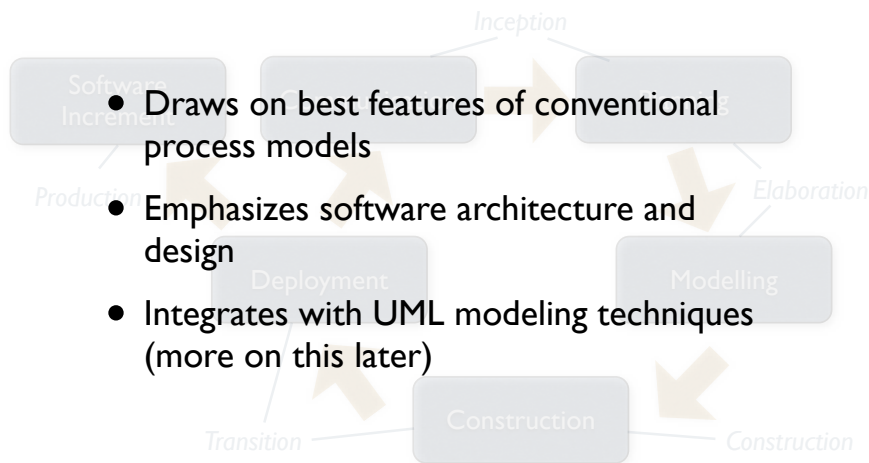

36

Unified Process

37

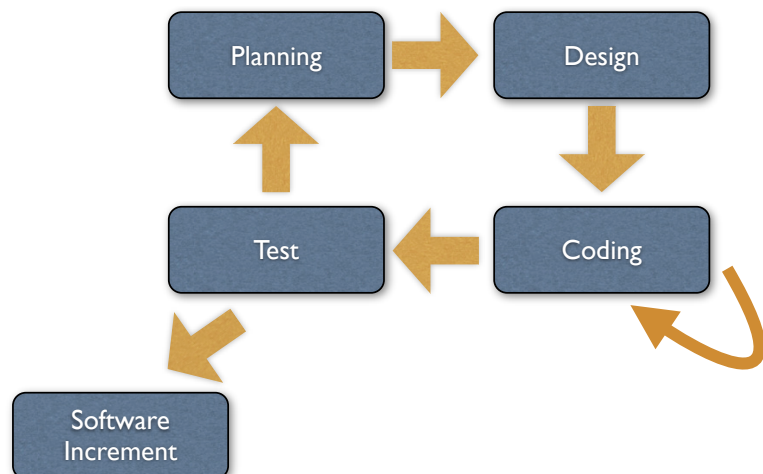

Unified Process
